

## GUIDE TO SHELF LIFE OF K-FLEX INSULATION PRODUCTS AND ACCESSORIES

The recommended shelf life of K-Flex USA manufactured elastomeric insulation products is one year from receipt of goods. However, if stored using good warehouse practices, the shelf life can be extended much longer. Following recommended first-in first-out warehouse procedure, we would expect that most products would be stored one year or less. Specifically;

The recommended shelf life for insulation products with PSA backing or seam seal closure PSA (SS and DS products), Elastomeric Foam Tape, Elastomeric Foam Tape ECO, K-Flex Seam Tape, CLAD AL and CLAD WT Tape, Cork Tape, and 120, 320, 373, 420, 620, 1120WB and 720 LVOC adhesives is one (1) year from date of shipment from the K-Flex USA Youngsville, NC plant or a K-Flex USA warehouse location, whichever is later. **The one exception is K-Flex 374 Protective Coating which has a 6 month shelf life from date of shipment.**

In all cases the products should be stored in the original unopened containers, indoors, not exposed to dirt, direct sunlight and other elements, at temperatures ranging from 50° F to 90° F. The material should not be compressed during storage.

Reference K-Flex USA Product Data Sheets for more detailed information about the products listed above.
